- Designing Data Models in Excel 2016
- Importing Excel Workbook Data into Power BI
- Publishing Data Models using Excel Workbooks
- Using the Power BI Publishing for Excel Add-in
- Connecting from Excel to a Power BI Dataset

#### The Excel Data Model

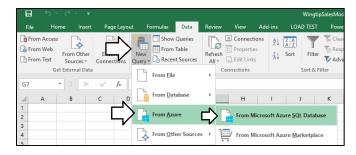

- Every Excel workbook file contains a data model
  - Data model stored as tabular database inside XLSX file
  - Based on xVelocity database engine just like PBIDT and SSAS
- When importing data with from an Excel query...
  - You can add the imported data as a table in a worksheet
  - You can add the imported data as a table in the data model

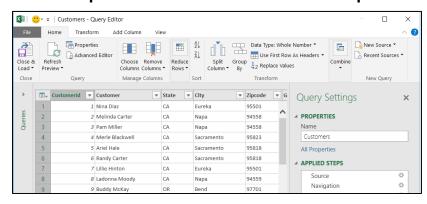

# Working with Query Tools in Excel 2016

- Excel 2016 provides query tools similar to PBIDT
  - Included with Excel 2013/2010 using Power Query add-in
  - Included natively in Excel 2016 Power Query add-in retired
  - Query functionality provided in Query tab in ribbon

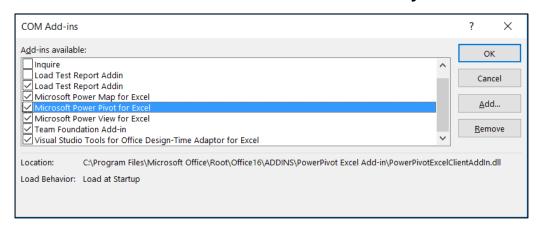

Excel queries are edited in separate Query Editor window

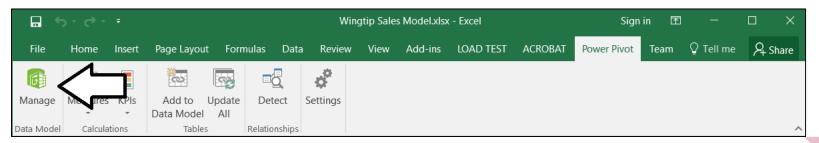

#### Working with the Power Pivot Add-in

- Data Modeling requires activation of Power Pivot add-in
  - Not activated by default in Excel 2016 or Excel 2013
  - Not activated nor even installed by default in Excel 2010

Once activated, new Power Pivot tab appears in ribbon

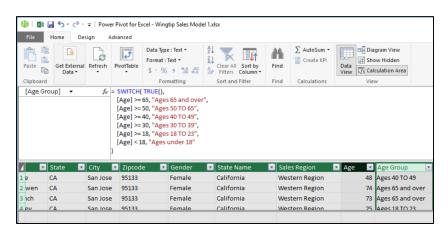

### **Building Data Models in Excel Workbooks**

- You create data model just like in Power BI Desktop
  - Convert column types and format column values
  - Add calculated columns using DAX expressions
  - Add measures using DAX expressions
  - Add a calendar table to support DAX time intelligence
  - Add dimensional hierarchies

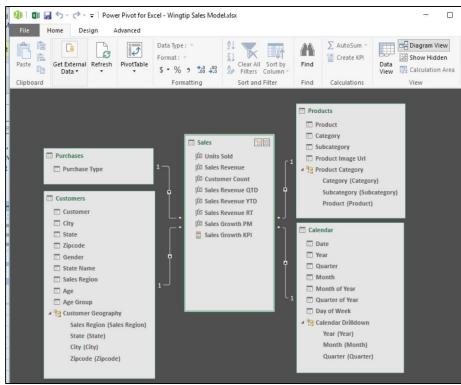

- Excel data model supports adding KPIs
  - Power BI Desktop does not provide equivalent feature

# **Using Power Pivot Add-in for Excel**

Measure				?	X
Table name:	Sales				~
Measure name:	Sales Revenue	RT			
Description:					
Formula: $f_{x}$	Check formula	a			
FILTER( ALL(Ca 'Calend )		((Calendar'[Date])			
Formatting Optio <u>Category:</u>	ns				
General Number Currency Date TRUE/FALSE		Symbol:  Decimal places:  Use 1000 separator (,)	\$		~
			OK	Cance	

#### **Adding Hierarchies to an Excel Data Model**

- Excel data model supports dimensional hierarchies
  - All column in a hierarchy must be from single table
  - Provides the same effect as dimensional hierarchies in PBIDT
  - Technique for creating hierarchies in Excel different from PBIDT

```
Customer Geography
Sales Region (Sales Region)
State (State)
City (City)
Zipcode (Zipcode)
```

```
✓ Calendar Drilldown

Year (Year)

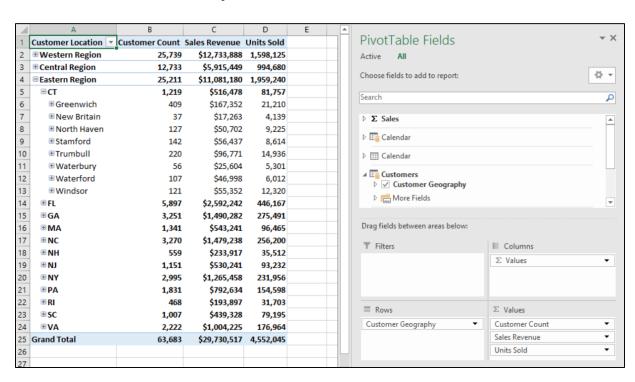

Month (Month)

Quarter (Quarter)
```

#### Creating PivotTables from Excel Data Model

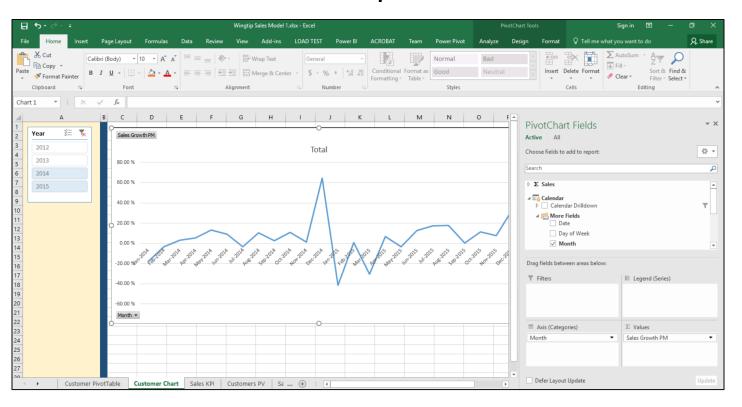

- Excel allows creation of PivotTables from data model
  - PivotTables are very popular with business users and data analysts
  - PivotTable allows user-friendly drilldown during data analysis
  - Excel PivotTables can be published to Excel Online
  - Power BI currently offers no visualization that matches Excel PivotTable

### Creating a Chart from an Excel Data Model

- Excel provides rich charting capabilities
  - Excel charts can also be published to Excel Online

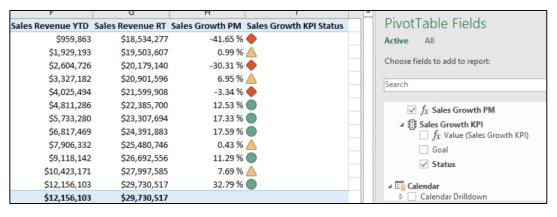

#### KPIs in an Excel Data Model

- Excel supports adding KPIs to data model
  - KPI created as visual layer on top of a measure
  - Power BI Desktop has no equivalent KPI support
  - Excel KPI can be used in Excel PivotTable

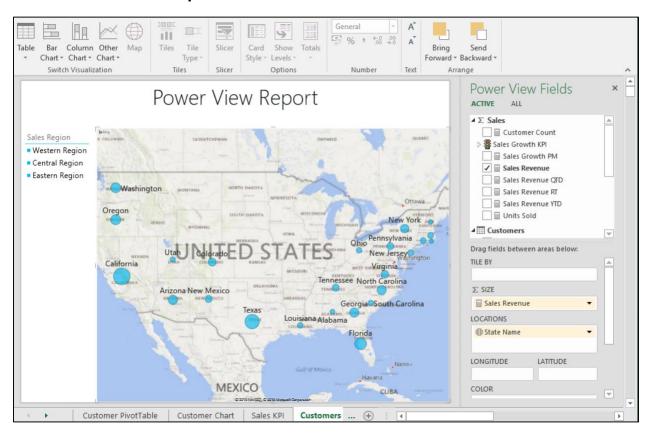

KPI from Excel data model can be used in Power BI report

### **Power View Reports in Excel**

- Excel 2013 supports creating reports with Power View
  - Power View is reporting layer on top of Excel data model
  - Power View report added as worksheet within workbook file

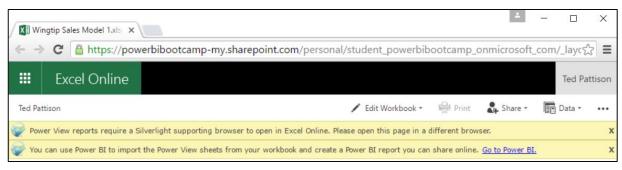

## **Power View Requires Silverlight**

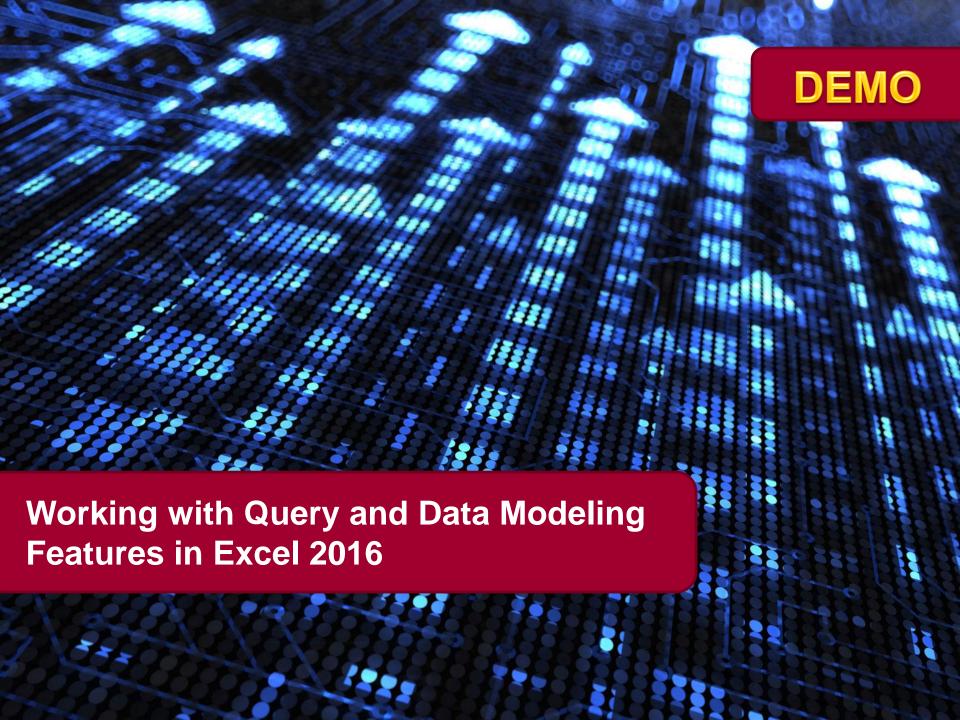

- Use of Power View requires Microsoft Silverlight
  - Required when using Power View in Excel and in Browser
  - Often requires user to install Silverlight

- Silverlight dependencies considered undesirable
  - Power View reports inaccessible to many browsers and mobile devices
  - Microsoft is currently trying to move away from using Silverlight

#### **Connect versus Import**

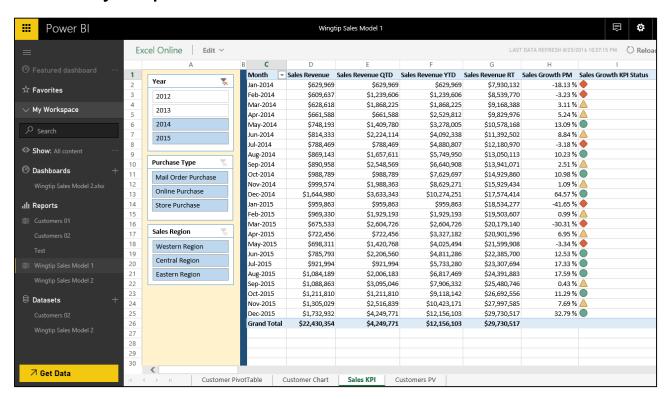

- Connecting to a Workbook from Power BI
  - Excel workbook file becomes live source of data
  - Power BI service hosted Excel Online to render Excel workbook
  - Power View reports can be viewed in browser but require Silverlight

# "Connecting To" a Power View Report

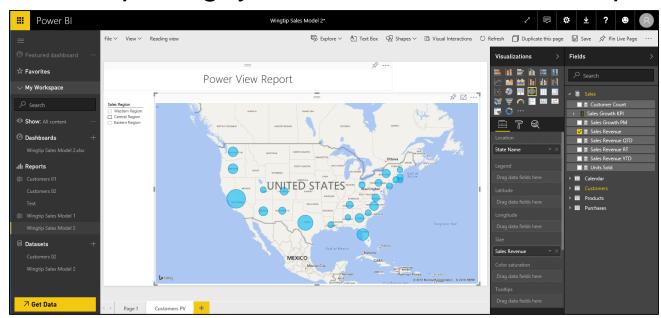

- When connecting to workbook with Power Reports...
  - Excel Online can render Power View reports in Power BI service
  - Requires a Silverlight-enabled browser this can be a pain point

# "Importing" Power View Reports

- Importing worksheet with Power View report...
  - Power View report converted into Power BI report
  - Silverlight elements replaced with Power BI visuals
  - Silverlight dependencies removed for broader reach
  - After importing, you can continue to edit report
